STAINLESS STEEL EQUIPMENT

Highland Equipment Ltd. supplies a revolutionary full port stainless steel Sanitary Ball Valve. With a simple and quick "single clamp disassembly" a 90 degree turn from "full on" to "off" and low friction for easy "ON/OFF" positioning with infinite throttling action, we believe this valve is designed for today's product market.

Manufactured from 316 Stainless Steel and specially machined to eliminate sharp corners where product could be trapped. The body gaskets are in a recessed area, and are completely surrounded by metal, presenting an interrupted path to flow media, there are no potential leak paths. The balls are precisely machined and polished to ensure low torque operation. Stems are stainless steel and standards include Teflon seat materials. Inside diameters are polished to a No.7 (10Ra) sanitary finish.
